

Iteration 1 Restrospective Team: TA 30

What went well?

We transition from naming stage to operation stage. I am happy to see everybody know what to do and to contribute their skill and knowledge for the collective success as a team.

Chandara Khvan

Thank you to the IT guys work tirelessly to get the product done for this iteration.

Chandara Khvan

Our idea of the product become reality. Because we been working so hard in brainstorming and research what to perfect our website.

Chandara Khvan

We can deploy application and achieve specification in the first iteration

Siramide Apivrasit...

The website developed was very engaging and has a smooth user journey which is well aligned to the audience. Because more time was allocated to collaboratively brainstorming idea and finalizing structure.

Thinitih Bulathsingh...

Features of the website was developed well on time for the submissions. All work was distributed based on team member skillset with a timeline which lead to increased efficiency.

Thinitih Bulathsingh...

We have a good teamwork and all of team member support each other

Siramide Apivrasit...

We all kept track of our progress, communicating daily through messaging and updating the Leankit as we went.

Manya Bhatia

We developed a high-quality website that catered to our target audience's needs and interests that was well-received by our peers, thanks to the clarity we all had about the website's audience and aims and the developers' incredible work.

Manya Bhatia

We successfully transformed our designed topics into a functional website, thanks to the invaluable support from the Data Science and MIS teams.

Mahesh Vijapur

Our collaboration and communication within the team were strong, allowing us to quickly address challenges and keep the project on track.

Mahesh Vijapur

What didn't go well?

Our iteration proposal got unexpectedly low marks than we are anticipated.

Chandara Khvan

We need to grooming some of the backlog due to time constraint, and miss estimate the timeline.

Chandara Khvan

Team member overwhelmed and we almost missed some deadlines.

Chandara Khvan

We had a lot of late night meetings, which encroached on our work-life balance and affected our physical and mental health negatively.

Manya Bhatia

We need to spend a lot of time for development the product and have a problem with time management.

Siramide Apivrasit...

There were some last minute bugs and errors, which meant that we submitted the build just before the deadline.

Manya Bhatia

We need to reformat leankit structure because it doesn't correspond to marking criteria

Siramide Apivrasit...

There were several items which were completed late at night which led to some items not being completed to expectation due to time constraints.

Thinitih Bulathsingh...

More time spent on revamping Leankit and PGP because initially social learning team content and peers to understand expected standards were not conduct.

Thinitih Bulathsingh...

We need to spend more time on the front-end of the our website because we got some scaling and responsive issues. So we will fix this issues in the later build.

Mahesh Vijapur

We encountered delays in integrating some of the front-end functionalities, which slowed down our overall progress. We'll need to streamline this process in future sprints. But we completed all the prototyped feature in iteration 1.

Mahesh Vijapur

What needs improvement?

I noticed some complacency after the mark released. We should take it as a lesson learnt and work harder and more cautious.

Chandara Khvan

Team should be more active and vigilant to the deadlines. We should have a weekly summary on what to submit. This will allow us early identify and allocate the time to complete them.

Chandara Khvan

We need to check the schedule and document carefully to make sure we completely submit all assignment based on guideline.

Siramide Apivrasit...

We need to check the schedule and document carefully to make sure we completely submit all assignment based on guideline.

Siramide Apivrasit...

Lesson learnt from iteration 1, we need to improve our self-organization structure. Executing the work that been agreed in a timely manner.

Chandara Khvan

We need to prioritise updating Leankit in order to keep track of what tasks are and what is pending, and be aware of all upcoming deadlines.

Manya Bhatia

We need to improve our time management in order to improve our work-life balance and avoid having late-night meetings.

Manya Bhatia

We need to strictly work upon the process and regular check tasks and budget in Leankit to prioritize the work.

Siramide Apivrasit...

We as a team should increase the frequency of updating and using Leankit and PGP incorporating feedback from colleagues and mentors.

Thinitih Bulathsingh...

In Technical developments all members should prioritize tasks such as integration and implementing features that we need at the start to avoid getting held in waiting content and getting stuck towards near the deadline.

Thinitih Bulathsingh...

We need to improve our time management. Currently, we're staying up until 2 a.m. to work on the project, which isn't sustainable. Since we all have efficient availability finding a solution to align our schedules better is essential.

Mahesh Vijapur

We should enhance our task prioritization. Often, we find ourselves juggling multiple tasks at once, which can lead to inefficiencies. Focusing on completing high-priority tasks first will help us work more effectively.

Mahesh Vijapur

Next steps

I think we will need to adjust our team work structure based on the mistake we learn in iteration 1.

Chandara Khvan

We will start working on iteration 2 that we have planned beforehand.

Siramide Apivrasit...

We will implement some features in iteration 1 after presenting on week 6

Siramide Apivrasit...

We will wait for the next feedback and adjust our website accordingly.

Chandara Khvan

We will take on the feedback from the usability testing videos and apply it to our website to make it more engaging and impactful.

Manya Bhatia

We will complete the Personal and Community Recovery pages and add narration to them for the next iteration in order to add more auto-based content to the website.

Manya Bhatia

We will address the feedback provided by our mentors and peers, working diligently to resolve the identified issues.

Mahesh Vijapur

We will focus on optimizing our workflow and communication to ensure more efficient collaboration and timely completion of tasks. Also we will start working on iteration 2.

Mahesh Vijapur

We will make it essential to prepare a roadmap or sketch of what is being development with the relevant content prior building to maintain the smooth user journey.

Thinitih Bulathsingh...

Team members will update leankit and PGP as they work while viewing for a day atleast.

Thinitih Bulathsingh...
